## Translator-Tool for Compact Connect

The translator tool for the Compact Connect gives you the opportunity to translate the program into your language version.

You find the tool under: **C:\Program Files\CompactConnect**

If you don't have the admin rights on your computer, you will not be able to save the language file. If that's the case, you have to make a right click on the **Translator-Tool** and choose **Run as administrator**.

### Procedure

1. Start the program by double click. The following window will open:

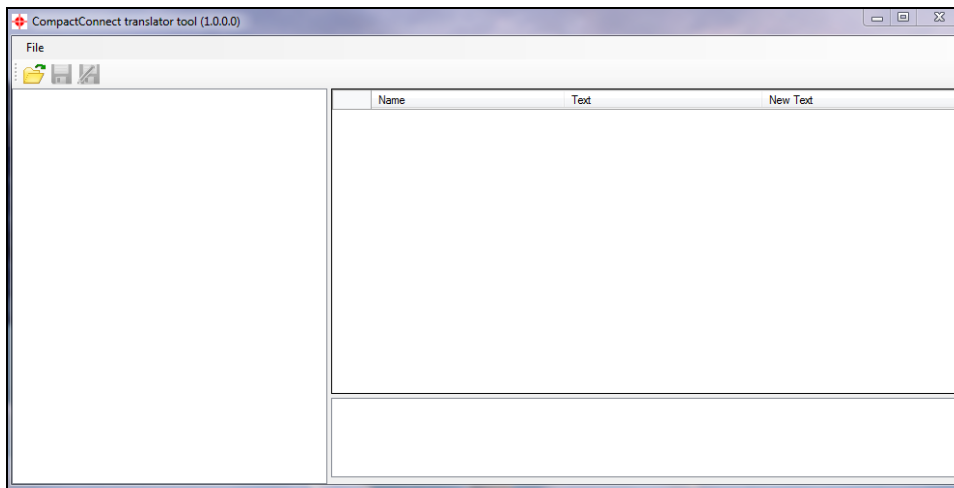

Figure 1: Starting the translator tool

2. Now click on **File** and **Open** or on the icon. Select a language you want to edit:

3. After selecting a language you will get the next window:

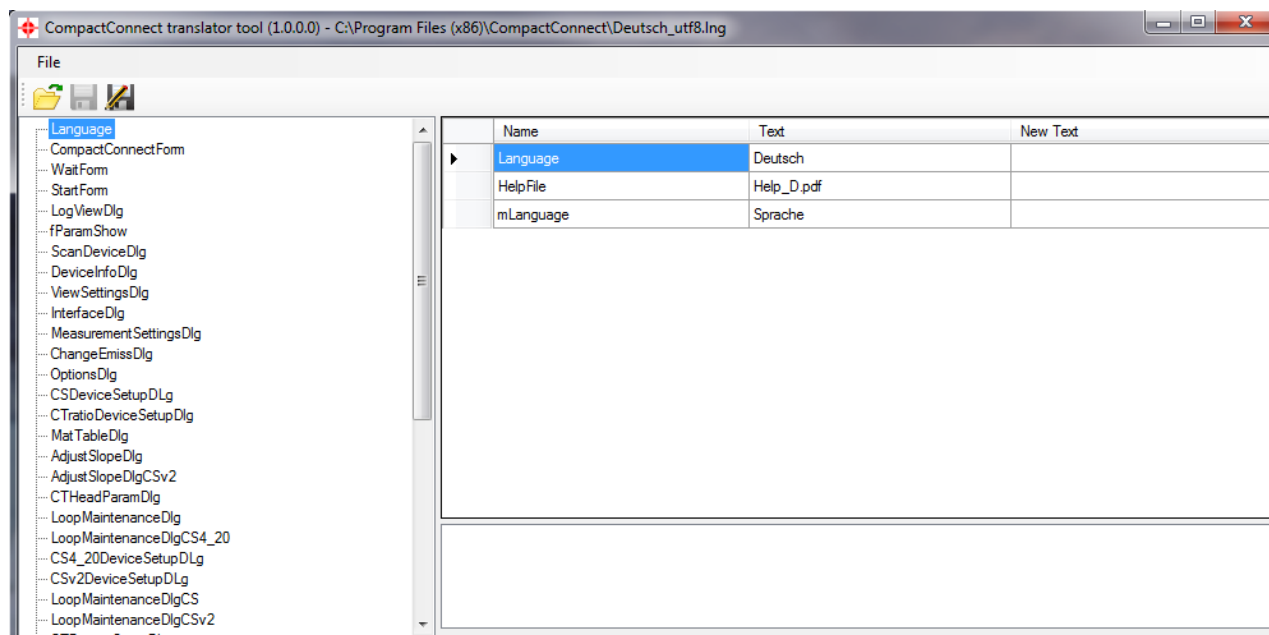

Figure 3: Main window of translator tool

4. On the left side you will find the different categories which you can select. On the right side all the items are shown which can be translated. There you find the **Name**, **Text** and **New Text**. Type in the new translation name in the column **New Text** and press **Enter** afterwards. To save the change go to **File** and **Save** or click on the icon.

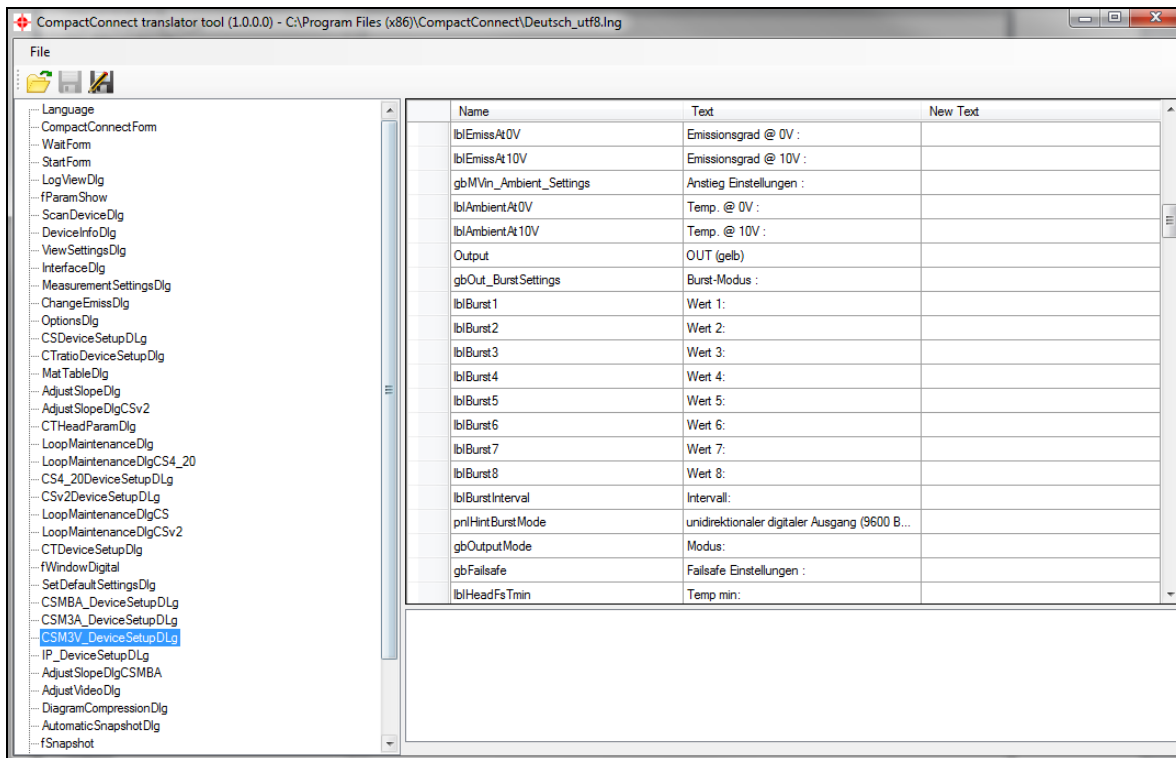

Figure 5: Translation is taking over in the column Text

5. You can also create a new language file which does not exist. Therefore go to **File** and **Save as** or click on the icon and type the new language name in and press **Save**.

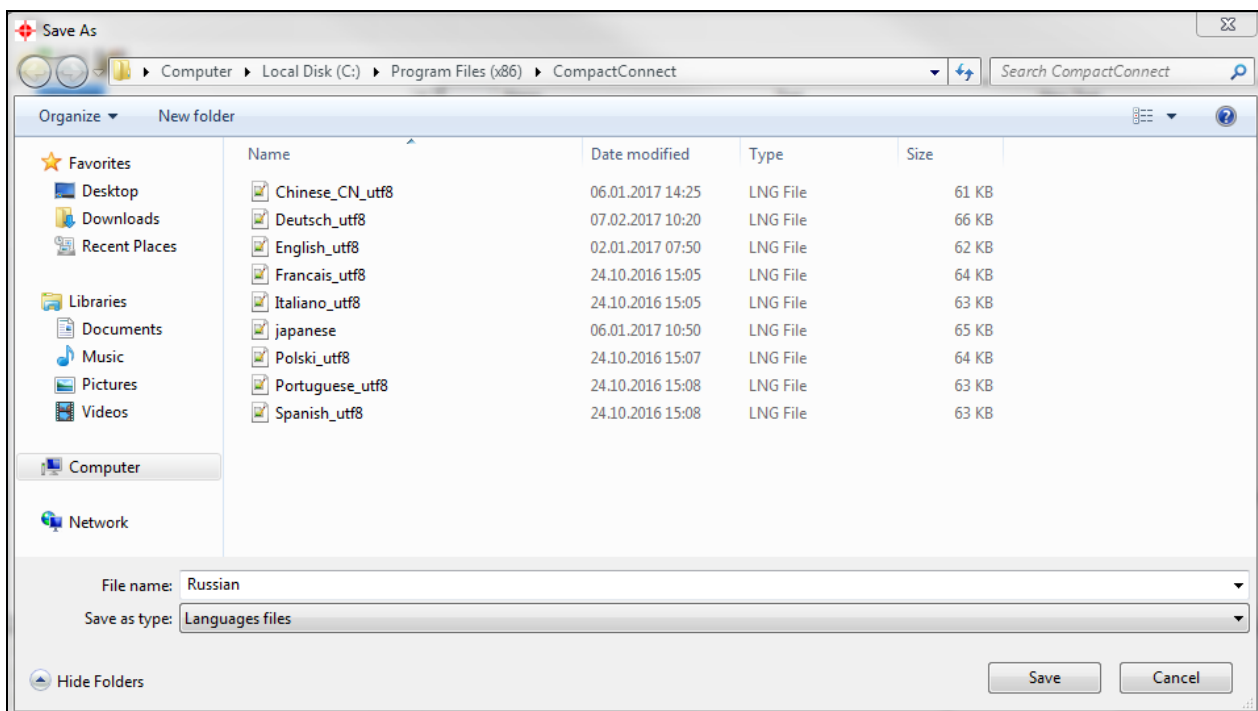

Figure 6: Save As and type in the new file name

# Manual

Another way to create a complete new language file that does not yet exist is to start the CompactConnect software. Then go to the menu **Preferences** and **Language**, choose your language, make a right click on your selected language and click on **Save language file**. The current selected language will be saved as a temp file. This way is recommended because it makes sure the latest CompactConnect software features are included.

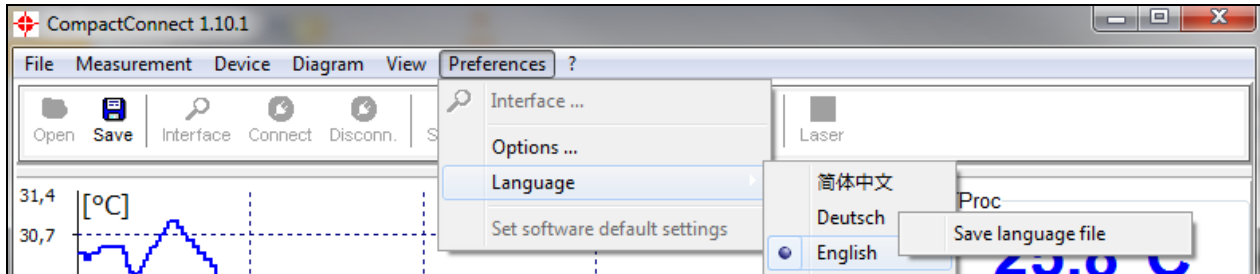

Figure 7: Save language file under CompactConnect

A **Temp.lng** file (language file) is created and you find it under:

**C:\ Program Files\ CompactConnect**

The next step is to rename the file into your language name. After doing that go again in the Translator-Tool and open the new created language file (LNG File). Now you can translate the language as described above.

Figure 8: Temp language file

Also if you want to update your already translated version from last time based on a new CompactConnect version that has for examples new features included, you only need to translate the new features by selecting your language under menu **Preferences** and **Language**. Afterwards **save the language file** as a temp file, rename it again and now you can translate the new features.
